1. Upgrading from v1.3.1.5 and later

To upgrade from Conflux Professional v1.3.1.5 or later to a newer version, please follow the instructions below:

1.1 Make a back-up copy of the database structure and files (optional)

```
mkdir c:\confupgrade\  
cd c:\confupgrade\  
c:\progra~1\postgr~1\8.0\bin\pg_dump -U postgres -f confluxpro.db.sql confluxpro OR  
c:\progra~1\postgr~1\8.1\bin\pg_dump -U postgres -f confluxpro.db.sql confluxpro  
copy "c:\program files\confluxprofessional\lib\_ConfUser.py" .  
move "c:\program files\confluxprofessional\DOCR00T" .
```

1.2 Run the new version installer:

1. Double click on the setup_1.5.0.exe file to start the installation process.
2. On the "Finish" page, leave "Configure (or upgrade) Conflux software" checked and click Finish. Once the "DOS Command Prompt" window announces success and closes, you are ready to use the upgraded version of Conflux. If the configuration program fails, please write down the program output and contact Inversion Software OÜ at support@inversion.ee for custom installation support. The free 5-user package of Conflux Professional for Windows does not currently have custom-installation support included.

You are now ready to use your new Conflux version.
